

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/552,715

Attorney Docket No. Q58947

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) A liquid-crystal display device comprising:

a light pipe including light output means for outputting light, said light output means formed on an upper surface of said light pipe;

a light source disposed near an incident side surface of said light pipe, light travelling along said light pipe being reflected toward a lower surface of said light pipe;

a reflection layer disposed on said lower surface of said light pipe so that said reflected light is again reflected, toward the upper surface of said light pipe, to be transmitted through said upper surface of said light pipe; and a liquid-crystal shutter disposed above said upper surface of said light pipe, said liquid-crystal shutter including liquid-crystal cells and at least one polarizing plate, further wherein

said light output means comprises a repetitious structure of continuous or discontinuous prism-like irregularities, each of said prism-like irregularities comprising:

a short side surface constituted by a slope inclined downward from the incident side surface toward an opposite end of the incident side surface at an inclination angle of less than 45 degrees with respect to a reference plane of said lower surface.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/552,715

Attorney Docket No. Q58947

2. (Previously presented) A liquid-crystal display device according to claim 1, wherein said light source is disposed adjacent to the incident side surface of said light pipe, and said light source is operable to be switched on and off.

3. (Currently Amended) A liquid-crystal display device according to claim 1, wherein ~~said light pipe has, at its upper surface,~~ said light output means ~~comprising~~ further comprises:

~~slopes facing said incident side surface and inclined at an angle of from 35 to 45 degrees with respect to a reference plane of said lower surface; and~~

flat surfaces inclined at a crossing angle of not larger than 10 degrees with respect to said reference plane wherein a projected area of said flat surfaces on said reference plane is not smaller than 8 times as large as a projected area of said slopes on said reference plane.

4. (Currently Amended) A liquid-crystal display device according to claim 1, wherein ~~said light output means on said upper surface of said light pipe has a repetition structure of continuous or discontinuous prism-like irregularities arranged at intervals of a pitch of from 50 μ m to 1.5 mm,~~ each of said prism-like irregularities are arranged at intervals of a pitch of from 50 μ m to 1.5 mm and further comprise comprising:

~~a short side surface constituted by a slope inclined downward from the incident side surface toward an opposite end of the incident side surface at an inclination angle of from 35 to 45 degrees with respect to a reference plane of said lower surface; and~~

a long side surface constituted by a slope inclined at an inclination angle in a range of from 0 to 10 degrees, exclusive of 0 degree, with respect to said reference plane so that

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/552,715

Attorney Docket No. Q58947

difference in the inclination angle among all of said slopes of the long side surface is within 5 degrees and the difference in the inclination angle between adjacent long side surfaces is within 1 degree, and

wherein a projected area of the long side surfaces on said reference plane is not smaller than 8 times as large as a projected area of the short side surfaces on said reference plane

5. (Currently Amended) A liquid-crystal display device according to claim [[4]] 1, wherein a ~~repetition~~ repetitious pitch of said prism-like irregularities is fixed.

6. (Currently Amended) A liquid-crystal display device according to claim [[4]] 1, wherein a projected width of each of said short side surfaces on said reference plane is not larger than 40 μm .

7. (Currently Amended) A liquid-crystal display device according to claim [[4]] 1, wherein a ridgeline direction of said prism-like irregularities is within ± 35 degrees with respect to a reference plane of said incident side surface.

8. (Original) A liquid-crystal display device according to claim 1, wherein incident light from said lower surface is transmitted through said upper surface at total light-rays transmissivity of not lower than 90 %.

9. (Original) A liquid-crystal display device according to claim 1, wherein said reflection layer on the lower surface of said light pipe is made at least one of selected from the group consisting of gold, silver, aluminum, and a dielectric multilayer film.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/552,715

Attorney Docket No. Q58947

10. (Original) A liquid-crystal display device according to claim 1, wherein said reflection layer on the lower surface of said light pipe is in contact with said lower surface of said light pipe so as to be integrated with said light pipe.

11. (Original) A liquid-crystal display device according to claim 1, wherein said reflection layer on the lower surface of said light pipe reflects light while diffusing said light.

12. (Currently Amended) A light pipe comprising:
an incident side surface;
an upper surface;
a lower surface with which a reflection layer is directly integrated; and
light output means formed on said upper surface so that incident light from said incident side surface is reflected toward said lower surface, and rereflected by the reflection layer to be transmitted through said upper surface,

wherein said light output means comprises:

slopes facing said incident side surface and inclined at an angle of ~~from 35 to 45~~ less than 45 degrees with respect to a reference plane of said lower surface; and

~~flat surfaces inclined at a crossing angle of not larger than 10 degrees with respect to said reference plane and provided so that a projected area of said flat surfaces on said reference plane is not smaller than 8 times as large as a projected area of said slopes on said reference plane.~~

13. (Currently Amended) A light pipe according to claim 12, wherein wherein said light output means has a ~~repetition~~ repetitious structure of continuous or discontinuous prism-like

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/552,715

Attorney Docket No. Q58947

irregularities arranged at intervals of a pitch of from 50 μm to 1.5 mm, each of said prism-like irregularities comprising:

~~said slopes facing said incident side surface; and a short side surface constituted by a slope inclined downward from the incident side surface toward an opposite end of the incident side surface at an inclination angle of from 35 to 45 degrees with respect to a reference plane of said lower surface~~

a long side surface constituted by a slope inclined at an inclination angle in a range of from 0 to 10 degrees, exclusive of 0 degree, with respect to said reference plane so that difference in the inclination angle among all of said slopes of the long side surface is within 5 degrees and the difference in the inclination angle between adjacent long side surfaces is within 1 degree, wherein

a projected area of the long side surfaces on said reference plane is not smaller than 8 times as large as a projected area of ~~the short side surfaces~~ said slopes facing said incident side surface on said reference plane.

14. (Currently Amended) A light pipe according to claim 13, wherein a ~~repetition~~ repetitious pitch of said prism-like irregularities is fixed.

15. (Currently Amended) A light pipe according to claim 13, wherein a projected width of each of ~~said short side surfaces~~ slopes facing said incident side surface on said reference plane is not larger than 40 μm .

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/552,715

Attorney Docket No. Q58947

16. (Original) A light pipe according to claim 13, wherein a ridgeline direction of said prism-like irregularities is within ± 35 degrees with respect to a reference plane of said incident side surface.
17. (Original) A light pipe according to claim 12, wherein said light pipe transmits light through said upper surface at total light-rays transmissivity of not lower than 90 % when said light is incident from said lower surface in a condition that said light pipe does not have the reflection layer.
18. (Original) A light pipe according to claim 12, wherein said reflection layer on the lower surface of said light pipe is made at least one of selected from the group consisting of gold, silver, aluminum, and a dielectric multilayer film.
19. (Original) A light pipe according to claim 12, wherein said reflection layer on the lower surface of said light pipe is in contact with said lower surface of said light pipe so as to be integrated with said light pipe.
20. (Original) A light pipe according to claim 12, wherein said reflection layer on the lower surface of said light pipe reflects light while diffusing said light.
21. (New) The liquid-crystal display device of claim 1, wherein said short side surface is inclined at an angle of not less than 35 degrees.
22. (New) The liquid-crystal display device of claim 12, wherein said slopes facing said incident side surface are inclined at an angle of not less than 35 degrees.
